

Soft Computing in Image Processing and Computer Vision

ISVC 2007 Special Track

<http://www.isvc.net/tracks.html>

Soft Computing is an emerging field comprising, among others, techniques such as fuzzy logic, neural computing, evolutionary computation, and machine learning. The intention of this special track is to provide a forum for current state-of-the-art approaches of soft computing techniques in image processing, computer vision and related applications.

Topics

Papers presenting original research of soft computing techniques and applications in the field of image processing and computer vision are sought. Topics include, but are not limited to, soft computing in:

- Image formation
- Image retrieval
- Image segmentation
- Image quality
- Video processing
- 3-D processing
- Physics-based vision
- Medical Imaging
- Image analysis
- Image registration
- Image coding and transmission
- Feature extraction
- Recognition
- Shape-from-X
- Scene understanding
- Applications

Important dates

Submission of papers: July 27, 2007

Notification of acceptance: August 24, 2007

Submission of final papers: September 7, 2007

Paper submission

Only original, high-quality papers, in-line with the ISVC 2007 standard guidelines will be considered for publication in this special track. Prospective authors should submit electronically their contributions through the ISVC 2007 website (<http://www.isvc.net>). Accepted papers will appear in the Symposium Proceedings which are to be published in Springer's Lecture Notes in Computer Science (LNCS) series.

Organisers

Gerald Schaefer, Aston University, G.Schaefer@aston.ac.uk

Mike Nachtgeael, Ghent University, Mike.Nachtgeael@ugent.be

Lars Nolle, Nottingham Trent University, Lars.Nolle@ntu.ac.uk
